

5 THINGS

YOU SHOULD ASK YOUR
TEST MANAGEMENT PROVIDER
ABOUT THEIR JIRA CONNECTION

So your organization has grown, good news!

And now it is clear that **you can no longer use a spreadsheet** to manage your testing process. You did the right research and found that an ALM solution, and in particular a test management tool is what you need. **But now, you already track your Issues using Atlassian JIRA.** True, you can keep on working with two isolated solutions, asking your testers to synchronize between the tests results and the Issues in JIRA, but wouldn't it be just fabulous to have them both integrate automatically?

So, many of the solution providers out there claim to support JIRA integration, but **how can you make sure that you are getting the most out of your ALM-JIRA integration?**

Here are 5 Things you Should Ask your Test Management Provider About Their JIRA Connection

Is it bidirectional? There is no doubt that you need to have all the information from your test management tool available in your bug tracking system, but, it is as important to have the issue tracking information available within your test management tool.

With PractiTest, you can enjoy real time bi-directional integration between your test management and bug tracking solutions such as JIRA.

Does it support both JIRA Cloud and JIRA Server? JIRA has both a cloud and a server versions, each requires a different integration. You need to make sure that the test management system you are using can support these two versions of Jira, and no less important is to make sure it will support your transition if in the future you choose to move from Jira Server to Jira Cloud, or vice-versa.

PractiTest ensures full support for both JIRA Server and JIRA Cloud and thus allows you to work the way you want to, and have the ability to change if you wish to do so.

Ease of set up. These days, you won't be hearing a 'No' to an integration question. But in many cases it is very complex, sometimes done via a 3rd party, unfriendly process, that's just not worth all the hassle.

PractiTest solution allows you to be up and running within 5 minutes. Without the need to use any 3rd party integration tools

Is it up to date and constantly adding new features? As technology keeps evolving at an amazing rate you need to be absolutely sure that your solution keeps evolving as well so you won't stay behind. Just as JIRA keeps changing and evolving, and just as you continue thinking about more things you want to strengthen in your process, you also want the integration between JIRA and your Test Management platform to continue growing and expanding with new ideas.

PractiTest SaaS solution keeps updating at all times and thus allows you to rest assure that your system is using top of the edge technology.

PractiTest is an innovative Test Management Tool. It ensures visibility and communication at all levels, enabling project development teams to streamline and manage their testing processes while providing management with a clear and simple view of their project status at all times.

PractiTest is ideal for Agile Testing, easy, intuitive, affordable and flexible providing its customers with the best in class system to meet their Testing and QA needs. PractiTest integrated with top bug/issue tracking systems such as JIRA, Bugzilla, Redmine, Pivotal Tracker and more.
